

SUMMARY

Product Manager with 7+ years of experience across SaaS and hospitality platforms, leading end-to-end product development and improving operational efficiency. Delivered data-driven solutions that increased booking efficiency by 30% and reduced drop-offs by 20%. Strong engineering background enables effective collaboration with cross-functional teams to ship scalable products.

WORK EXPERIENCE

Product Manager	SamMegh Technologies, Bangalore	Oct 2024 – Present
Owned the end-to-end Product Roadmap and Lifecycle to consolidate fragmented travel booking flows via complex API integrations.		
- Integrated flight, hotel, and cab APIs to address fragmented booking flows, significantly improving booking efficiency by 30% - Introduced approval workflows to reduce manual delays, decreasing turnaround time by 40% and improving compliance - Revamped cab booking UX to address pricing ambiguity, leveraging Google Maps API insights to reduce drop-offs by 20% - Improved payment reliability by integrating Razorpay safeguards, reducing failures by 15% and increasing completion rate - Defined requirements and collaborated with engineering, design, and stakeholders to deliver business-aligned features - Prioritized product backlog based on business impact, user needs, and engineering feasibility, aligned with product roadmap - Defined and tracked key product metrics (conversion rate, drop-offs, completion rate) to guide data-driven product decisions		
Front End Developer	Stayntouch Inc., Maryland, USA	Jan 2021 – Oct 2024
Contributed to a SaaS property management platform, improving user workflows and scalability for large hotel clients		
- Migrated AngularJS modules to Angular to reduce tech debt, improving release speed by 25% and maintenance effort by 30% - Partnered with product and QA teams to proactively resolve critical issues, significantly reducing customer complaints by 20 - Redesigned reusable UI components to enhance consistency across modules and reduce new feature delivery time by 30% - Streamlined mobile and web performance, significantly boosting usability for hotel staff and decreasing bounce rates by 25% - Analyzed support logs and user feedback to influence roadmap prioritization and increase delivery of relevant features by 30%		
Front End Developer	Platinus Technologies, Bangalore	Jun 2015 – Aug 2018
Contributed to a consumer-facing home services platform, improving booking experience and conversion rates		
- Designed and optimized booking flows based on user behavior insights to reduce friction and improve completion rates by 15% - Enabled real-time availability updates through seamless backend integration, notably increasing peak-hour booking rates by 20% - Deployed Razorpay to optimize the payment process, leading to an 18% rise in successful checkout conversion rates consistently - Streamlined in-app navigation with React Router DOM, effectively reducing user drop-offs by 20% across booking steps steadily - Collaborated with design and backend teams to improve seamless end-to-end user experience across booking journeys holistically		

EDUCATION DETAILS

Masters in Data Analytics Engineering	Bachelor's in computer science engineering
George Mason University, USA - 2020	Siddaganga Institute Of Technology, India - 2015

SKILLS

Product management: User Research, Roadmapping, PRD writing, KPI Tracking | **Product Strategy:** Product Life Cycle Management, Feature Prioritization, Stakeholder Management, Product Discovery, Go-to-market (GTM), Customer Journey Mapping | **Analytics :** Tableau, SQL, Google Analytics, A/B Testing | **Technical :** JavaScript, React, Angular, Redux, | **Tools:** JIRA, Agile, Scrum, Confluence

CERTIFICATIONS

Product Management Certification — Upraised
Completed hands-on training in product strategy, user research, and PRD development with a real-world capstone project

PROJECTS

Geospatial Disaster Relief – Sponsored by Accenture Federal Services
Tools: Python, GDAL, OpenStreetMap

- Processed NOAA aerial imagery and geospatial datasets using GDAL to prepare high-quality aligned raster data for analysis
- Built flood detection approach by combining terrain-based modelling (Height Above Nearest Drainage) with image-based analysis
- Created pixel-level annotated datasets to significantly improve model accuracy and reduce overall training time for flood detection
- Compared flood prediction methods and identified terrain-based modeling as more effective in detecting flood-prone regions
